

Remote Sensing and Photogrammetry Society Annual Conference 2008

RSPSoc 2008: “Measuring change in the Earth system”

15-17 September 2008

University of Exeter, Cornwall Campus, Falmouth, UK

Theme:

- The interdisciplinary theme of the conference (“Measuring change in the Earth system”) will bring together researchers and practitioners from across the discipline, and will facilitate discussion of key issues in remote sensing and photogrammetry, in relation to wider questions in science.

Highlights:

- First class social events in the idyllic surroundings of the Cornish coast
- High-quality, research-led technical programme
- On-site accommodation
- Commercial sessions and exhibition

Technical sessions will include:

- Remote sensing and climate change
- Data assimilation and uncertainty
- Water quality in inland and coastal waters
- Spatial-spectral-temporal signatures in RS data
- Calibration & validation of Earth observation data
- Plus we welcome input from the wider community on other special sessions of interest

The first call for papers will be made in January 2008.

Please consult the RSPSoc website for the latest news on the conference: www.rspsoc.org.

For further information, please contact the RSPSoc Office: rspsoc@nottingham.ac.uk

Convenor: Dr Karen Anderson: karen.anderson@exeter.ac.uk
