TOPICS The International School represents an important occasion to establish contacts between experts in archaeology, cultural heritage, art history and experts from remote sensing, photogrammetry, GIS, computer graphics, virtual reality, etc. In archaeology the systematic and correct use of 3D models for documentation and conservation started just recently, but it is still lacking applications for different reasons. The School will face and discuss these problems, giving participants the opportunity to obtain a detailed overview of the main methods and applications to archaeological and conservation research and practice. Furthermore, our School will give the chance to participants to enter in a very short time the kernel of the scientific discussion on 3D technologies' surveying methods, documentation, data management and data interpretation in archaeological research and practice.

DEADLINES GRANT APPLICATION: FEBRUARY 15TH, 2008
REGISTRATION FEE: MARCH 31ST, 2008
